Science tomorrow it is FRACTAL

Since our establishment on July 8, 2016, we were able to come to today without stopping evolution. With driving energy to convey the enjoyment of science to more people, I met many people, connected, shared various times. FRACTAL's philosophy is "to science tomorrow". If you do the same thing today as yesterday, tomorrow will not come anything will come. With this philosophy in mind, I will do something different from yesterday. And I will change tomorrow. I spend days with such feelings.

However, it is natural that I do not come by myself alone, and I feel that I could not connect with many people. Those who came to FRACTAL, those who supported my project, students who have built up further encounters, the university people who cooperated for the evolution of FRACTAL, those of the research institute. We have received support from so many people, I realize that there is today. I could not come so far alone. Thank you very much. I sincerely appreciate your feelings of gratitude and promise to go forward steadily, I will also make every effort to promote scientific education and science development and research.

I think that there are many things that will not lead yet, but I hope you continue to watch and support FRACTAL.

Thank you very much for today's day. I would appreciate your favor in the future.

FRACTAL CEO

Hiroki Sakai
